This image is a mosaic consisted of 60 RADARSAT image scenes in scan SAR Narrow B mode, which have been acquired from 1997 to 1999. The spatial resolution of this image is 50 (m) which has been reduced to 500 (m) so as to be depicted in this scale. Its radiometric resolution is 8 bits. Since, the microwave part of electromagnetic wave can penetrate through clouds, snow and vegetations canopies, the ground objects and the outcrop of rocks can be easily observed in the RADAR image without any vegetations. RADAR image can be used in order to highlight lineaments and tectonic structures.
